

YOU HAVE A CHANCE TO WIN BLACK BEARS TICKETS!

We're excited to share a little extra fun with our Hindsight readers this season! As a member of the Hinds Energy email list, you're already entered for a chance to win five tickets to a Binghamton Black Bears home game.

Hinds Energy is proud to be a season sponsor of the Black Bears again this year, and throughout the season, we'll have several different ways for our customers and community to win tickets.

We're starting right here with you. Our first winner will be selected from the Hinds Energy email list on October 1, 2026. If you're reading this, there's nothing else you need to do. You're already entered.

Thank you for welcoming Hindsight into your inbox each month. We're glad you're here, and we're looking forward to sharing some Black Bears hockey with a few of you this season!

Tickets will be mailed to the winner after they are received by Hinds Energy.

SEPTEMBER 2026

A BETTER PRICE ON A WINTER ESSENTIAL

Sometimes saving our customers money means doing a little extra work behind the scenes.

This summer, the Hinds Mart team worked on shortening the supply chain for our windshield washer fluid, helping us bring down the price you'll see on the shelf this fall. It's part of our commitment to keeping the everyday things you need as affordable as we can.

So, as you're getting the car ready for another Southern Tier winter, remember Hinds Mart for your windshield washer fluid, at a price we worked hard to bring down.

A TUNE UP CAN FIND MORE THAN YOU THINK

A preseason tune up may seem like another item on the fall to do list, but sometimes it catches something that really matters.

During one preseason tune up, one of our technicians discovered a cracked heat exchanger, a potentially dangerous problem that can allow combustion gases, including carbon monoxide, to enter the home.

It's a good reminder that preseason maintenance isn't only about helping your heating system run well. It also gives our technicians a chance to take a closer look and spot potential problems before your heating system is working hard all winter.
